## 1. Background

A proposed mineral agreement between the Democratic Republic of Congo (DRC) and the United States has garnered global attention. The deal, still under negotiation, reportedly provides the U.S. with **strategic access to DRC's \$20 trillion mineral reserves** in exchange for enhanced U.S. military and strategic support. President Félix Tshisekedi has described it as **a potential pathway to "peace and prosperity"** for the Congolese people.

## 2. Strategic Benefits for the DRC

### 2.1. Enhanced Security and Peacebuilding

- U.S. military support could help the DRC **counter armed groups** in the eastern provinces and secure mining zones.
- Improved security conditions **may attract long-term private investment** and reduce humanitarian crises.

### 2.2. Increased Geopolitical Leverage

- Engagement with the U.S. **raises the DRC's global profile** and diversifies its strategic partnerships beyond traditional allies (e.g., China, France, Belgium).
- It can increase **the DRC's bargaining power** in global mineral supply chains.

### 2.3. Infrastructure and Institutional Development

- The deal could be **structured** to include infrastructure investments in transport, energy, and logistics.
- If tied to **governance reforms**, it may strengthen regulatory institutions and public accountability.

### 2.4. Technology Transfer and Capacity Building

- **Partnership with U.S. entities** may bring modern mining technologies, skills training, and environmental safeguards.
- **Potential for value chain upgrading** and local beneficiation of minerals (e.g. cobalt, lithium, copper).

### 2.5. Economic Transformation and Job Creation

- Proper revenue management could support national development goals in education, health, and entrepreneurship.
- Promotion of Congolese SMEs in mining supply chains can create inclusive, green jobs.

### 3. Considerations for Sustainable Implementation

To ensure national benefit, the agreement must:

- Uphold Congolese sovereignty over its resources
- Include transparency mechanisms (e.g., EITI standards)
- Safeguard community rights and the environment
- Establish fair value-sharing models
- Promote local workforce inclusion and gender equality.

### 4. Peace Gold – A best practice approach to small-scale mining

PeaceGold's mission is to see gold in Eastern Democratic Republic of Congo become a tool for peace and prosperity for local communities.

PeaceGold aims to **build peace in conflict-affected artisanal and small-scale gold mining communities in Ituri province**, Democratic Republic of Congo. Some of the benefits include:

- Traceable origins
- Removing child labour
- Community-based psycho-social support
- Transparent, legalised supply chain
- Investment into local community
- Ethical and environmental protection
- Creation of a community-led social fund
- Rehabilitating former combatants.<sup>1</sup>

### 5. Conclusion

If strategically negotiated and transparently implemented, this **mineral deal could mark a historic opportunity for the DRC** to convert its vast natural wealth into peace, prosperity, and sustainable industrial transformation. The key lies in responsible governance, equitable distribution, and long-term vision.<sup>2</sup>
